Professional provider of international Financial and Cost Accounting implements electronic signature at DAIICHI SANKYO EUROPE - Print Management PORTOLAN MOI runs on every ERP solution and platform

The Mail-and-Office Integration solution MOI by PORTOLAN Commerce Solutions GmbH, situated in Ilsfeld, plays an increasingly important role in the area of output management and workflow improvement at the DAIICHI SANKYO Group in Europe. PORTOLAN is a professional provider of business solutions for international financial accounting and controlling. While the application had been used for company-wide investment planning in the first instance, it is nowadays used for accounting, quality management, order processing and invoicing by European group subsidiaries. With the MOI module for digital signature, DAIICHI SANKYO Europe now disposes of a tested and certified method to assure the authorship of sent e-mails. Now it is possible to send invoices in electronic format without any user help required since the employed cryptographic method ensures that the recipient doesn't run the risk to lose the ability to deduct prepaid VAT. PORTOLAN MOI fulfills all qualifications to send PDF documents correctly according to § 14 III UStG (sales tax legislation) and GDPdU („Principles of Data Access and Verifiability of Digital Documents“).

„In particular in reference to our certificates of analysis and quality attestations, MOI has facilitated our daily work in regards to editing for printout and automatic distribution since 2005, the year in which the installation took place“ says Dr. Theodor Poettinger, Head of Quality Control at DAIICHI SANKYO EUROPE at the production headquarters in Pfaffenhofen. „Today, we rarely have to send original documents by mail or fax. The possibility to attach a digital signature to our documents in the future additionally supports our decision.“

Efficient workflow for communication

PORTOLAN MOI generates printouts based on the IBM system i within the production planning and control system (PPS) and accounting. Furthermore, certificates of analysis and quality attestations are generated as PDF and Microsoft Excel output via a Labor Information Management System (LIMS). In addition, the integration in the Group-ware solution Lotus Notes ensures a logged e-mail dispatch to internal and external addresses without any manual effort.

„The uncomplicated introduction of MOI as a tool for internal and external communication turned out to be right after a very short period of time. It has increased quality and saves time and costs. Manual effort - and the risks involved - could be reduced to a minimum“, says Volkmar Großert, the person in charge of the Customer Service Department at DAIICHI SANKYO EUROPE.

„Our application isn't limited to the output of own applications only. PORTOLAN MOI can be configured as workflow system for printouts of all types on different platforms. The integration of the digital signature in 2006 as the latest MOI component at DAIICHI SANKYO EUROPE is another important benefit“, says Jörg Siegel, PORTOLAN's product manager for MOI and responsible for the DAIICHI SANKYO project.
